# Environmental Problems Review

Grade: 7th  
Subject: Life Science  
Date:

May 16-11:32 AM

- 1 A natural resource that can be replaced at the same rate that it is consumed at is a renewable resource.

May 16-11:30 AM

- 2 An unwanted change in the environment that is caused by substances or forms of energy is called pollution.

May 16-11:31 AM

3 Too many organisms in one area for the available resources is called overcrowding/competition

May 16-11:32 AM

4 The number and the variety of organisms in an ecosystem is referred to as biodiversity

May 16-11:33 AM

5 Five major kinds of pollution include garbage, chemicals, high-powered wastes, and...

- A dirt and grime
- ☒ B gases and noise
- C trash and water
- D biodegradable and volcanic wastes

May 16-11:34 AM

6 An organism that makes a home for itself in a new place is called a(n)...

- A endangered species
- B new species
- C strange species
- ☒ D exotic species

May 16-11:34 AM

7 Advances in medicine and in farming have increased...

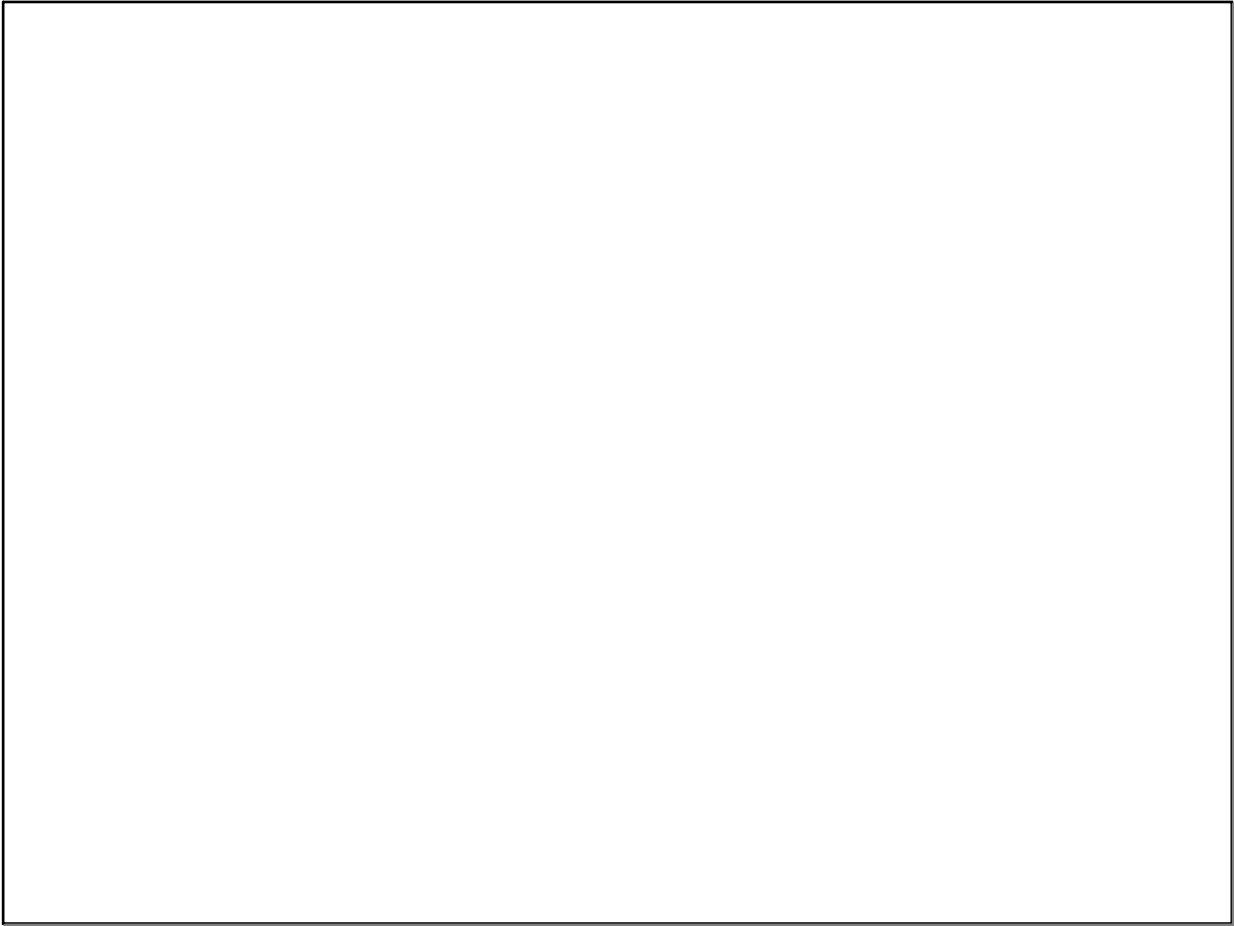

- ☒ A human population growth
- ☐ B biodiversity
- ☐ C renewable resources
- ☐ D exotic species

May 16-11:35 AM

8 An example of habitat destruction is ...

- ☐ A planting trees
- ☐ B cleaning up oil spills
- ☒ C clearing a tropical rain forest
- ☐ D preventing nonpoint-source pollution
